DETAILED ACTION

Claim 37 is drawn to the method of employing a compound that is encompassed by the formula (1). Since the method of employing compounds of formula (1) is withdrawn from consideration as being a non-elected invention as stated in Paper 9, claim 37 is withdrawn.

Claims 1-13 and 31-40 are pending.

Allowable Subject Matter

Claims 31-36 and 38-40 are allowed over the cited prior art. The cited prior art does not teach or fairly suggest the herein claimed method of treating hypercholesterolemic mammal by employing the compounds of formula (3).

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-13 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for dyslipidemia, hypercholesterolemia, or hypocholesterolemia, does not reasonably provide enablement for othe FXR-mediated pathological conditions. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention commensurate in scope with these claims. In the instant case, the instant specification

Art Unit: 1617

fails to provide information that would allow the skilled artisan to practice the instant invention without undue experimentation. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) at 1404 where the court set forth the eight factors to consider when assessing if a disclosure would have required undue experimentation. Citing *Ex parte Forman*, 230 USPQ 546 (BdApl 1986) at 547 the court recited eight factors:

- 1) the quantity of experimentation necessary,
- 2) the amount of direction or guidance provided,
- 3) the presence of absence of working examples,
- 4) the nature of the invention,
- 5) the state of the prior art,
- 6) the relative skill of those in the art
- 7) the predictability of the art, and
- 8) the breadth of the claims.

The claims are very broad. They encompass any disorders, clinical or sub-clinical, detectable or non-detectable, pathological conditions that are mediated by FXR. Applicant fails to set forth the criteria that define "FXR mediated pathological conditions". The instant specification gives no guidance or information as to what would be considered FXR- mediated pathological conditions other than dyslipidemia, hyper- or hypocholesterolemia. Additionally, Applicant fails to provide information allowing the skilled artisan to ascertain these conditions without undue experimentation. In the instant case, only a limited number of "FXR mediated pathological conditions" examples

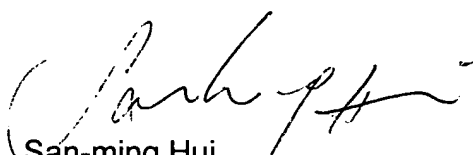

Art Unit: 1617

are set forth, thereby failing to provide sufficient working examples. It is noted that these examples are neither exhaustive, nor define the common symptoms that is being treated. The pharmaceutical art is unpredictable, requiring each embodiment to be individually assessed for physiological activity. The instant claims read on all "FXR mediated pathological condition(s)", necessitating an exhaustive search for the pathological conditions suitable to practice the claimed invention. Applicants fail to provide information sufficient to practice the claimed invention, absent undue experimentation.
